

Branch: Digital systems

Code : SSHSSI

Option : Safety and security of housing and service sector infrastructures

Level : Bac Pro

Prerequisites:

Opportunities:

The professions are those of technician or technician adviser, after-sales service, or home automation integrator. They will work in the field of installations that contribute to the safety of goods and people in building automation systems (industrial buildings) and home automation systems (private homes).

Description :

The holders of the Bac Pro Digital Systems option SSIHT work on the installations and equipment of digital systems: hardware and software. This option concerns the field of safety and security of goods and people. It may involve the management of alarm systems, fire safety systems, etc., the active management of industrial buildings (centralised technical management of access, etc.) or home automation systems (management of private homes: personal assistance, video protection).

Quality and competences :

This vocational baccalaureate covers all the professional skills needed to carry out activities related to the preparation, installation, implementation, commissioning and maintenance of digital systems in the field of security of goods and people.

Graduates also participate in customer service by working with the sales departments.

Graduates will be able to carry out their functions in the consulting, installation or maintenance of digital systems, in any service or industrial company: technical service or maintenance centre, craftsman, manufacturer, etc.
